

# OPERATIVE NOVEMBER CHALLENGE

This month's challenges are all number mazes. In these mazes, the number you're standing on tells you how many spaces you can move. You'll start on the number in the upper left corner, which means your first move will be that many spaces either down or to the right. The number you land on will tell you how many spaces you can jump on your next move. You may only move up, down, left, or right. You may not move diagonally and you may not turn mid-move (you must stay in the same row or column for an entire move until you get to the next space). See you if you can figure out a strategy to help you. Can you make it to finish?

Bring in the solution to earn your blue Mastery Credit. Good luck!
